Why Choose FOCUS for LED?

- FOCUS' proprietary **LED** technology is superior to other exterior **LED** lighting products because of our ability to match the warm white color of halogen bulbs and our consistent light output over a wide range of input voltages.
- Now with 4 different types of technologies; **Retrofit, LED Modules, Flat Panel LED & LED Strip**, FOCUS offers you more **LED** solutions than anyone else.
- No special installation or wiring is required with FOCUS Plug & Play **LED's**. It is as easy as changing the light bulb.
- FOCUS **LED's** are manufactured to our specification for a consistent color range of 2700K - 3000K.
- We offer a complete line of **LED** products including fixtures, light sources and transformers.
- FOCUS **LED's** are designed to be used in outdoor environments in any climate as well as indoor applications.
- Designed for fully enclosed fixtures

Energy Efficient and Environmentally Friendly

- Long Term Cost Savings - **LED's** on average use 75% less energy than traditional incandescent or halogen bulbs.
- Have More Fixtures and Use Less Power - FOCUS **LED** transformers are smaller so they use less power and are designed to allow for 4 to 5 times more fixtures per run.
- FOCUS **LED's** offer up to 50,000 hours average life compared to 2,000 hours for a regular halogen bulb. Not having to replace halogen light bulbs frequently will save you both time and money.
- Environmentally Friendly - **LED's** are mercury free.
